PROFESSIONAL SUMMARY

SDET / Test Automation Lead with 13+ years of experience in Software Quality Engineering, specializing in automation architecture, framework development, CI/CD, and quality engineering transformation. Hands-on expertise in Playwright, Selenium, Java, JavaScript/TypeScript, API automation, Appium, SQL, Jenkins, GitHub Actions, AWS and QAOps. Proven experience leading Selenium-to-Playwright migration, improving test reliability, driving shift-left testing, mentoring QA/SDET engineers, and partnering with engineering and product stakeholders. Experienced in AI-assisted engineering using Cursor and Claude with repository-level rules and reusable skills/workflows.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript
UI Automation: Selenium WebDriver, Selenium Grid, Playwright, WebdriverIO, Appium
Frameworks & Design: Hybrid and data-driven frameworks, Page Object Model (POM), Cucumber BDD, TestNG, JUnit, Maven
API Testing: REST Assured, Postman, Playwright API, REST API validation
Database & Backend Validation: SQL, PostgreSQL
Reporting & Test Management: Allure, Extent Report, Cucumber JVM Report
CI/CD & DevOps: Jenkins, GitHub Actions, Docker, Kubernetes, Git, Bitbucket, JFrog Artifactory
Cloud & Test Platforms: AWS, BrowserStack, Sauce Labs
Ways of Working: Agile/Scrum, test planning, risk-based regression, release validation, mentoring and team coordination

PROFESSIONAL EXPERIENCE

XORIANT SOLUTIONS | Test Automation Lead Nov 2023 – Present | Pune

Project Title: Health Insurance Exchange (HIX)
Domain: Health Insurance
Client: GetInsured, Vimo, US
Role: SDET
Project: GetInsured is a healthcare technology platform that enables individuals and families to compare, select, and enroll in health insurance plans through state-based marketplaces. The platform supports the Affordable Care Act (ACA) ecosystem by facilitating health insurance shopping, eligibility and enrolment workflows, and interactions among consumers, insurance carriers, agents, and state agencies.

The project involved supporting a multi-state health insurance exchange solution, ensuring the quality, reliability, and functionality of state-specific marketplace implementations across states including Georgia, New Jersey, Nevada, Oregon, and Pennsylvania. The platform supports critical business workflows and requires comprehensive regression testing to maintain quality during releases and Open Enrollment periods.

Responsibilities:

- Lead and contributed in UI and API automation initiatives for enterprise healthcare insurance applications across multiple states, owning regression automation and release-quality validation.
- Contributed Selenium-to-Playwright migration using Page Object Model, reusable framework utilities, selector management, and Cucumber, improving execution efficiency and reducing flaky automation.
- Established automation standards using stable data-testid locators, explicit waits/auto-waiting, reusable Browser and Assertion utilities, and maintainable test design.
- Integrated automated regression suites with Jenkins CI/CD pipelines and supported sprint-level shift-left testing aligned with stories and acceptance criteria.
- Incorporated HIPAA and data privacy considerations into test automation practices, ensuring appropriate handling of sensitive healthcare data, secure test data usage, and validation of role-based access controls across multi-state health insurance workflows. Partner with developers, product owners, and technical stakeholders to identify quality risks early and provide evidence-based release readiness.
- Mentor QA/SDET engineers on automation architecture, coding standards, debugging, framework usage, and quality ownership.
- Use Cursor and Claude for AI-assisted engineering with repository-level rules and reusable skills/workflows rather than ad-hoc prompting.

SYNECHRON TECHNOLOGIES | SDET Lead Sep 2021 – Nov 2023 | Pune

Project Title: Test Automation Services

Client: Asurion, US

Domain: Insurance – Device Protection & Extended Warranty Insurance

Role: SDET

Project: Asurion is a technology protection and support services company that helps consumers protect, repair, and maintain their electronic devices and home appliances. Its services include device protection plans, technical support, troubleshooting, and repair services for smartphones, computers, and other connected devices.

Responsibilities:

- Worked as part of the centralized Test Automation Services (TAS) team / QA CoE, providing automation framework, test engineering, and DevOps capabilities to multiple project teams.
- Designed, developed, maintained, and supported reusable automation frameworks and solutions that could be adopted across project teams.
- Built and maintained CI/CD automation using Jenkins, supporting automated test execution and integration into project delivery pipelines.
- Supported DevOps-related activities for automation environments, including test execution infrastructure, build integration, and continuous test execution.
- Conducted framework/code reviews and promoted common automation standards, reusable components, coding practices, and maintainable test design across teams.
- Mentored QA engineers on Selenium, Java, automation framework design, debugging, and automation best practices.
- Contributed to BDD implementation using Gherkin/Cucumber aligned with acceptance criteria.

TATA CONSULTANCY SERVICES | QA Automation Engineer Jun 2016– Sep 2021 | Pune

Project Title: Coverage Central

Client: Morgan Stanley, US

Domain: Banking & Financial

Role: Automation Test Engineer

Project: Coverage Central, a platform supporting the lead-generation and client-engagement process. The application helped identify and manage potential customers for Morgan Stanley by capturing prospective client information and supporting follow-up activities.

Responsibilities:

- Worked on Coverage Central, a platform used by Morgan Stanley's Wealth Management business to support prospecting, reservations, workflow requests, reporting, and client/product coverage activities.
- Led and guided a 5-member team for testing activities.
- Automated functional test scenarios using Selenium WebDriver, Java, and Hybrid Framework for regression cycles.
- Performed REST API testing using Postman and Rest Assured.
- Participated in test planning, scheduling, test-case assignment, defect-log maintenance, and test-result reviews.
- Coordinated with functional and technical teams to define testing scope for different phases.

Project Title: Microsoft Office

Client: Microsoft, US

Domain: Hi-tech

Role: Automation Test Engineer

Project: Microsoft Office is a suite of productivity applications that includes Microsoft Word, Excel, PowerPoint, Outlook, and other Office tools. The project focused on the mobile versions of these Office applications, enabling users to create, view, edit, and manage documents, spreadsheets, presentations, and other Office content on mobile devices. The applications provided users with access to core Office functionality while working across supported mobile platforms and devices.

Responsibilities:

- Performed functional and regression testing of Microsoft Office mobile applications across different devices, operating systems, and screen resolutions.
- Executed cross-platform compatibility testing on Windows and supported mobile platforms to ensure consistent application behavior.
- Validated core functionalities of Microsoft Word, Excel, PowerPoint, and Outlook, including document creation, editing, viewing, and sharing.
- Identified, documented, and tracked defects, collaborating with developers to ensure timely resolution and improve application quality.

- Executed test cases, reported test results, and performed retesting and regression testing to validate fixes across multiple devices and platforms.

HURIX DIGITAL | Software Test Engineer Oct 2014 – Jun 2016 | Pune

Project Title: Kitaboo - Digital Publishing and E-Learning Platform

Client: Pearson, McGraw-Hill

Domain: E-learning

Role: Test Engineer

Project: KITABOO is a cloud-based digital publishing platform that enables publishers, educational institutions, and enterprises to create, enrich, secure, and distribute interactive digital books and learning content. The platform supports multimedia content, including audio, video, and quizzes, along with secure DRM-protected distribution, online and offline reading, and access across web and mobile devices. It integrates with learning management systems (LMS) to facilitate digital content delivery and enhance the overall learning experience.

Responsibilities:

- Tested the Kitaboo interactive eBook creation and publishing platform**,** covering modules including Book Creation, Enrich, Publisher, License, and Distribution.
- Developed automation scripts for Mobile Native applications on Android using Appium and Java.
- Analyzed product requirements and prepared detailed test cases.
- Executed functional, integration, regression, and performance testing.
- Performed environment verification and manual test execution against functional requirements and specifications.
- Reported, tracked, retested, and regressed defects throughout release cycles.
- Analyzed defects and collaborated with development teams for successful resolution.

GLOBALSTEP SERVICES | Test Engineer May 2013– Oct 2014 | Pune

Project Title: BigFish Game Manager

Client: Disney

Domain: Gaming & Entertainment

Role: Test Engineer

Project: BigFish Game Manager is a gaming platform that enables users to discover, download, install, update, and manage casual games.

Responsibilities:

- Performed functional, system, regression, sanity, and integration testing for web-based applications.
- Analyzed business requirements and prepared detailed test scenarios and test cases.
- Executed test cases and reported defects using established defect-tracking processes.
- Performed regression and retesting to validate defect fixes across release cycles.
- Collaborated with developers and QA team members during defect analysis and resolution.
- Contributed to test documentation, test execution reporting, and release validation.

EDUCATION

- B. Tech in Computer Science — North Maharashtra University, Jalgaon

CERTIFICATIONS & AWARDS

- AWS Certified AI Practitioner
- ISTQB (CTFL) Certified Tester – Foundation Level
- Best Team Award – Xoriant
- Received SDET RoleX Certification - Xoriant
- Star of the Month – 4 Times, Synechron Technologies
- Pat On the Back - TCS
